

Debug A Web Presentation

CSCI 1150

Due: April 15

Use **WDG HTML Validator** to check the correctness of the HTML code in your web presentation. This tool reports all errors found and the number of pages verified. Check **Validate entire site** and **Hide valid results** on the **WDG HTML Validator** page. Read the number of pages validated by the tool at the end of report produced and match that with the number of pages you have in your site. Fix all errors reported by the tool. Save the report produced as `htmlcheck.html` in your `public.html` folder.

Use **Link Checker** tool to look for broken links and broken images in your web presentation. Make sure you check **Check linked documents recursively**. Fix all errors reported by this tool. Save the HTML document produced as `linkcheck.html` in your `public.html` folder.

Deliverable

The two pages showing the results of the html validation and link check should be available at the following URLs:

`http://astro.armstrong.edu/~yourUserName/htmlcheck.html`.

`http://astro.armstrong.edu/~yourUserName/linkcheck.html`.
